SISTEMA LINEAL S1 Y S3

S1 AND S3 LINEAR SYSTEM

SYSTÈME BORD À BORD S1 ET S3

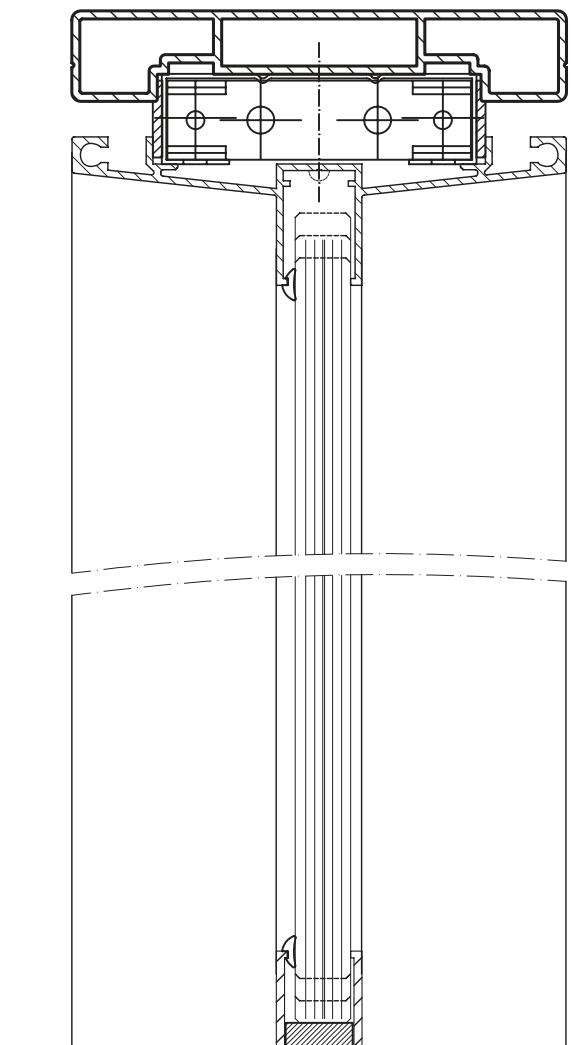

Altura de vidrio = A + 22
Nivel = ± 5 mm por metro
Salida de vidrio = 10 mm

S1 and S3 linear system
Height of glass = A+22
Level= ± 5 mm per metre
Protrusion of glass = 10 mm

Système bord à bord S1 et S3
Hauteur de vitre= A+22
Niveau = ± 5 mm par mètre
Sortie de verre = 10 mm

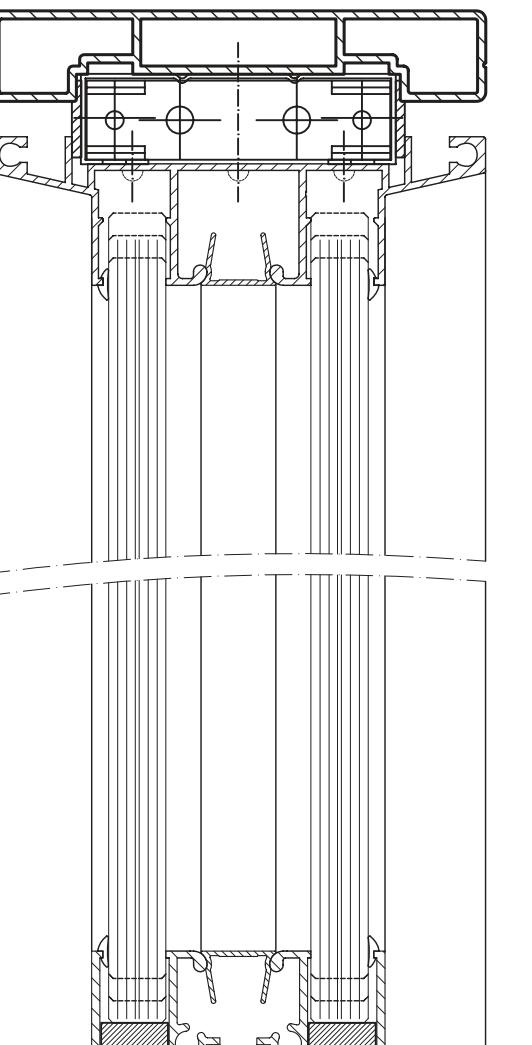

S1 & S3 BOX

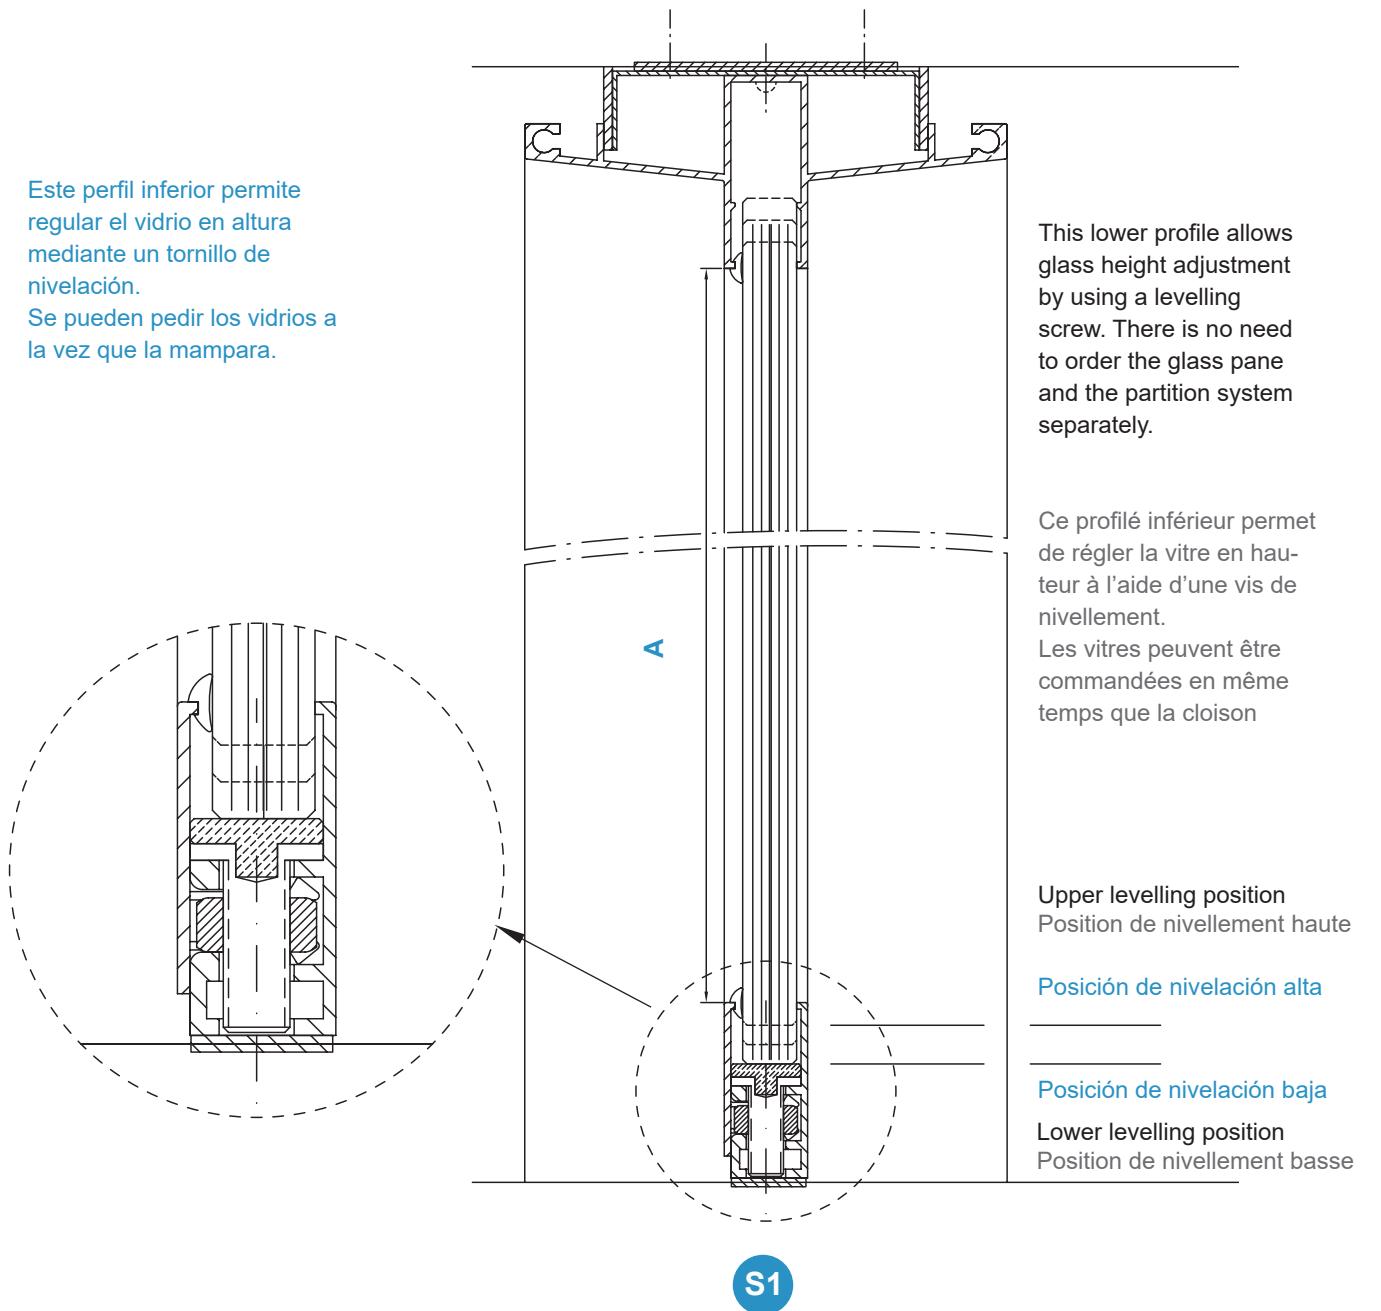

Este perfil inferior permite regular el vidrio en altura mediante calzos. Los vidrios deben de ser medidas en obra.

This lower profile allows glass height adjustment by using wedges. The glass panes must be measured on site.

Ce profilé inférieur permet de régler la vitre en hauteur à l'aide de cales. Les vitres doivent être mesurées sur le chantier.

SISTEMA LINEAL S1 Y S3**S1 AND S3 LINEAR SYSTEM****SYSTÈME BORD À BORD S1 ET S3**

**Altura de vidrio = A+27 mm
Nivel = 10 mm
Absorción de alturas = 35 mm**

**S1 and S3 linear system
Height of glass = A+27 mm
Level= 10 mm
Height absorption= 35 mm**

**Système linéaire S1 et S3
Hauteur de vitre= A+27 mm
Niveau = 10 mm
Absorption de dénivélés = 35 mm**

**Upper levelling position
Position de nivellation haute**

Posición de nivelación alta

**Posición de nivelación baja
Lower levelling position
Position de nivellation basse**

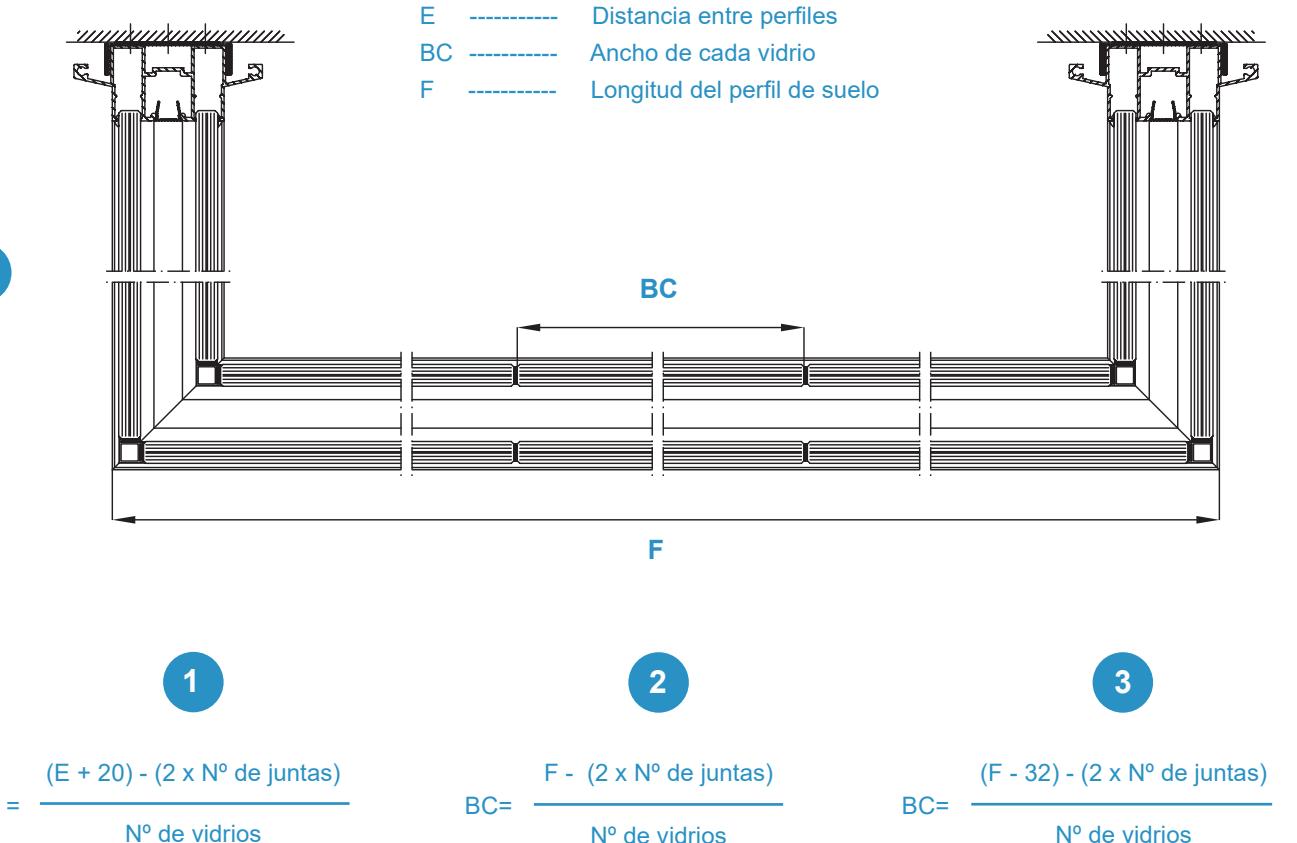

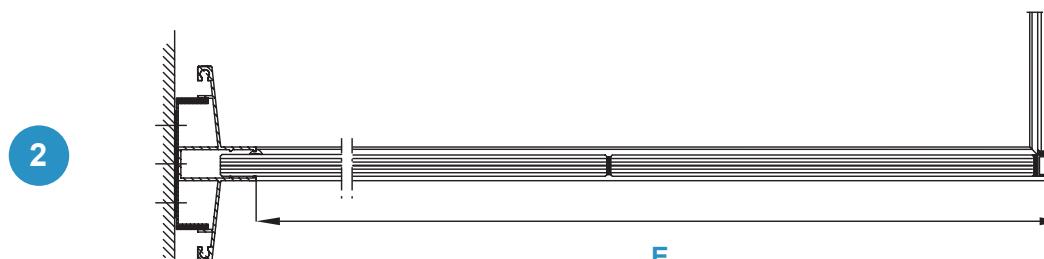

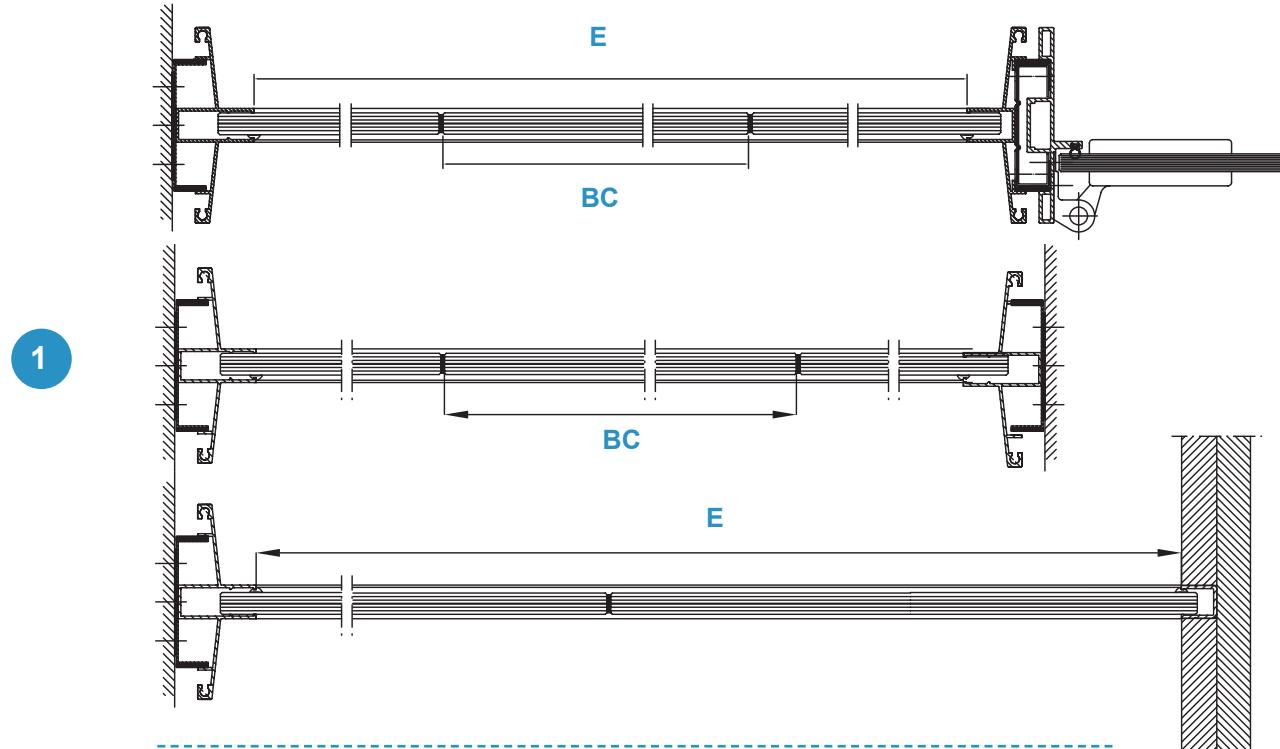

S3

El cálculo de las dimensiones de los vidrios en el sistema lineal continuo se realizará en obra.

CÁLCULO PARA LA S1 Y S3

CALCULATION FOR S1 AND S3

CALCUL POUR S1 ET S3

The calculation of the dimensions of the glass panes in the continuous linear system is done on site.
E Distance between profiles
BC Width of each glass panels
F Length of floor profile

1 BC= $\frac{(E + 20) - (2 \times \text{Nº de juntas})}{\text{Nº de vidrios}}$
2 BC= $\frac{F - (2 \times \text{Nº de juntas})}{\text{Nº de vidrios}}$
3 BC= $\frac{(F - 32) - (2 \times \text{Nº de juntas})}{\text{Nº de vidrios}}$

Le calcul des dimensions des vitres dans le système bord à bord se fera sur le chantier.
E Distance entre profilés
BC Largeur de chaque vitre
F Longueur du profilé du sol

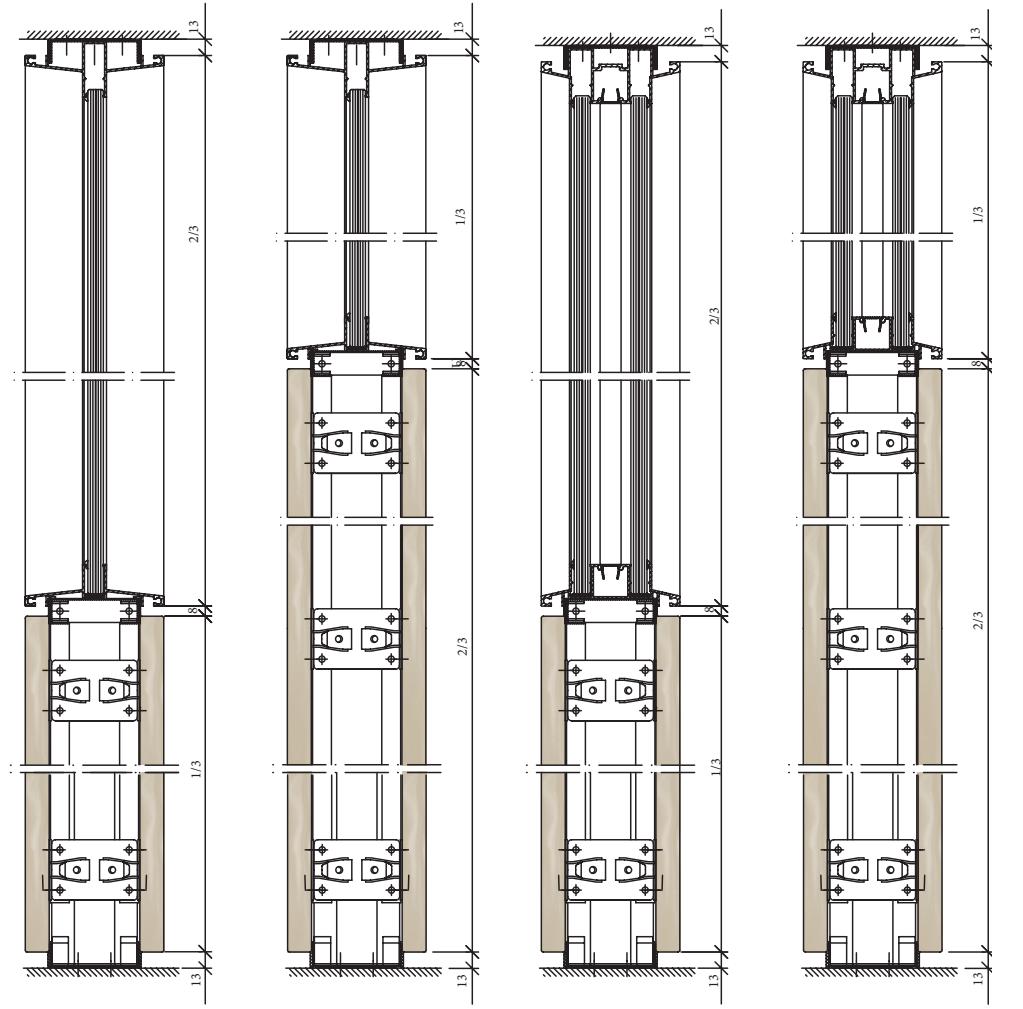

1 BC= $\frac{(E + 20) - (2 \times \text{Nº de juntas})}{\text{Nº de vitres}}$
2 BC= $\frac{F - (2 \times \text{Nº de juntas})}{\text{Nº de vitres}}$
3 BC= $\frac{(F - 32) - (2 \times \text{Nº de juntas})}{\text{Nº de vitres}}$

INTEGRACIÓN PERFECTA DEL SISTEMA LINEAL CON EL MODULAR

PERFECT INTEGRATION OF THE LINEAR SYSTEM WITH THE MODULAR SYSTEM

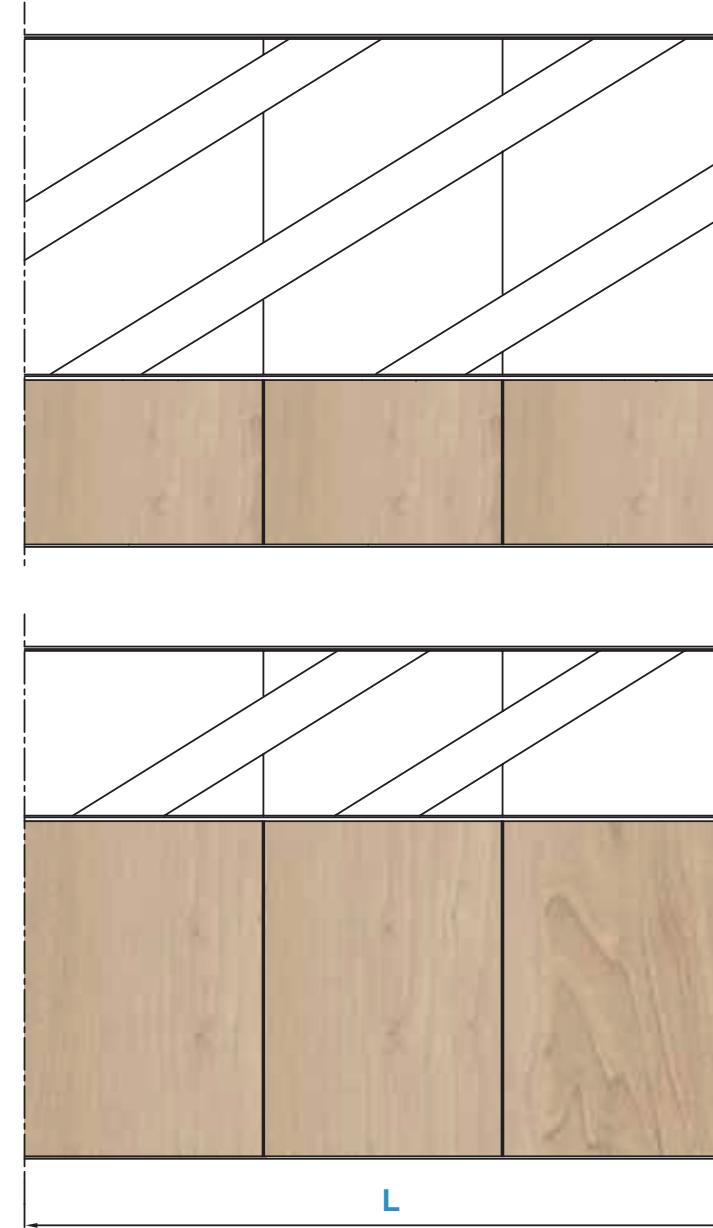

INTÉGRATION PARFAITE DU SYSTÈME BORD À BORD AU SYSTÈME MODULAIRE

S1

S3

MAMPARAS CON 1/3 Y 2/3 CON EL SISTEMA LINEAL

La dimensión máxima de tabique con 1/3 - 2/3 de vidrio continuo será de 3500 mm, sin elementos de sujeción suelo - techo.

Mixed partitions with 1/3 and 2/3 linear system.
Maximum length of the partition with 1/3 solid - 2/3 continuous glass is 3500mm without floor-ceiling attachment elements.

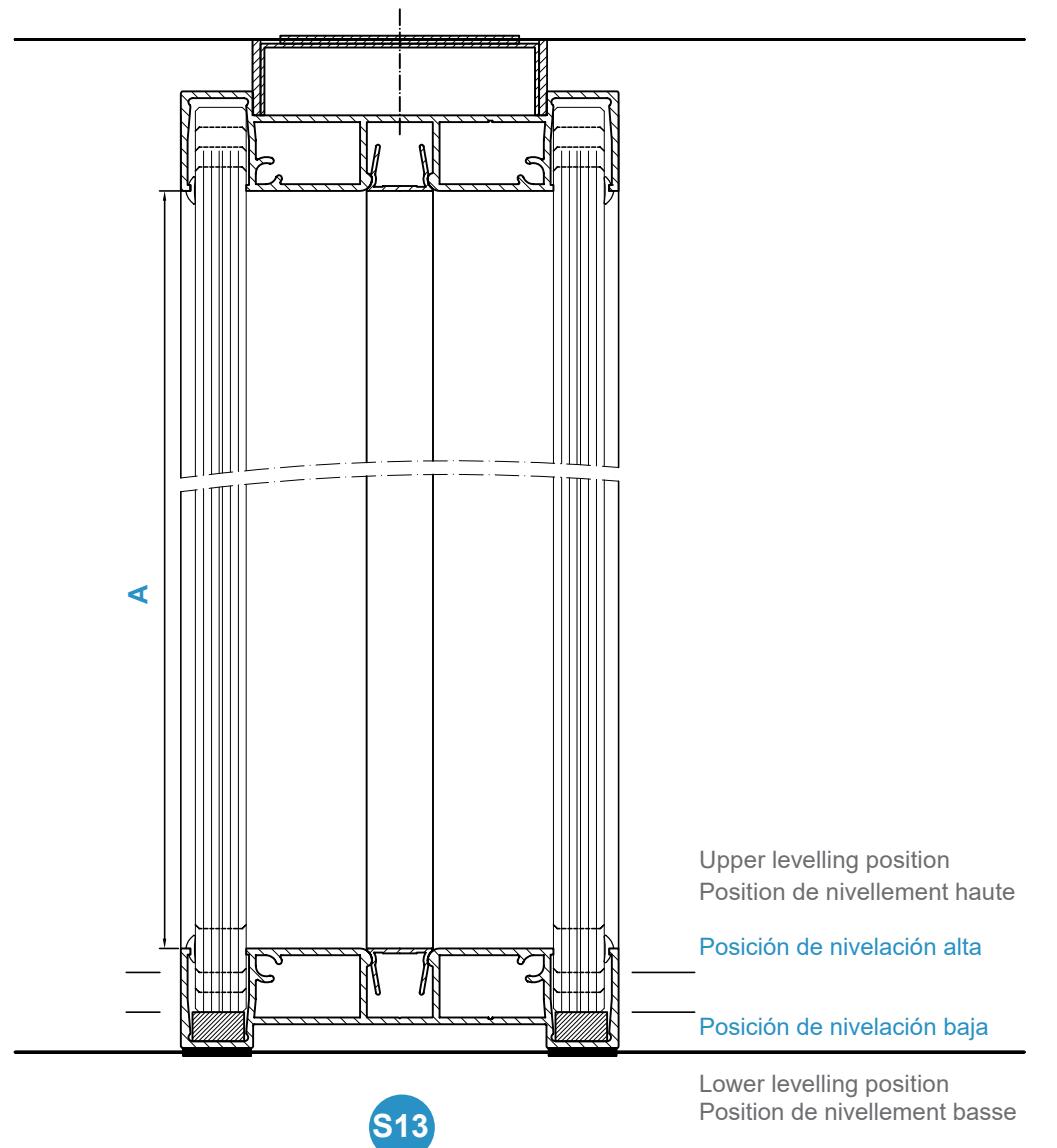

Cloisons sur allège 1/3-2/3 en système bord à bord.
La longueur maximale de la cloison sur allège 1/3-2/3 bord à bord sera de 3500mm sans éléments de fixation sol-plafond.

S13

SISTEMA LINEAL

LINEAR SYSTEM

SYSTÈME BORD À BORD

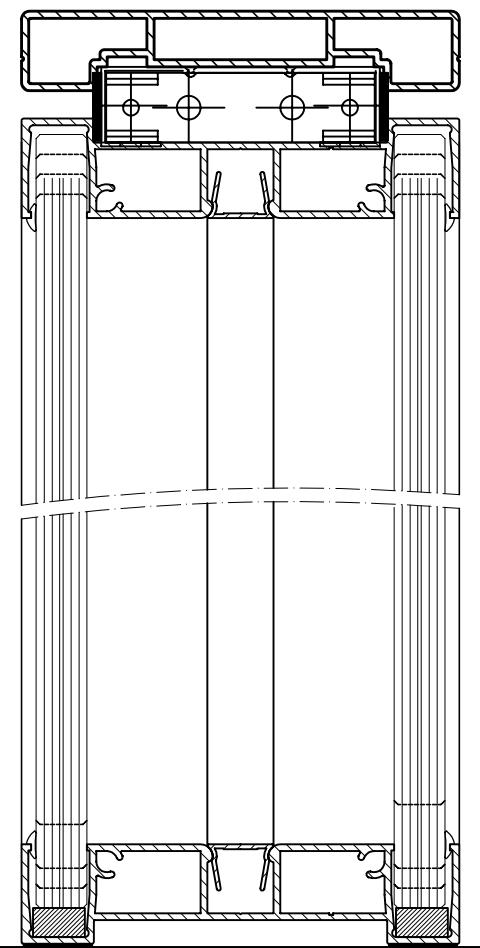

Altura de vidrio = A + 18
Nivel = ± 3 mm por metro
Salida de vidrio = 5 mm

S13 linear system
Height of glass = A+18
Level= ± 3 mm per metre
Protrusion of glass = 5 mm

Système linéaire S13
Hauteur de vitre= A+18
Niveau = ± 3 mm par mètre
Sortie de verre = 5 mm

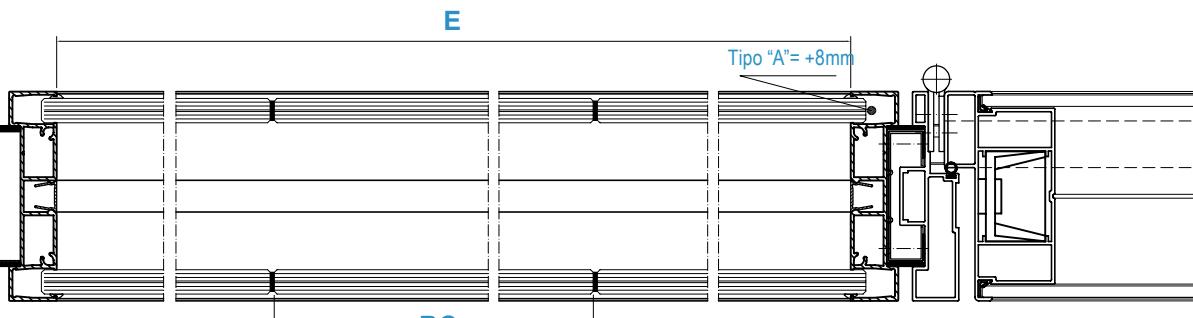

S13 BOX

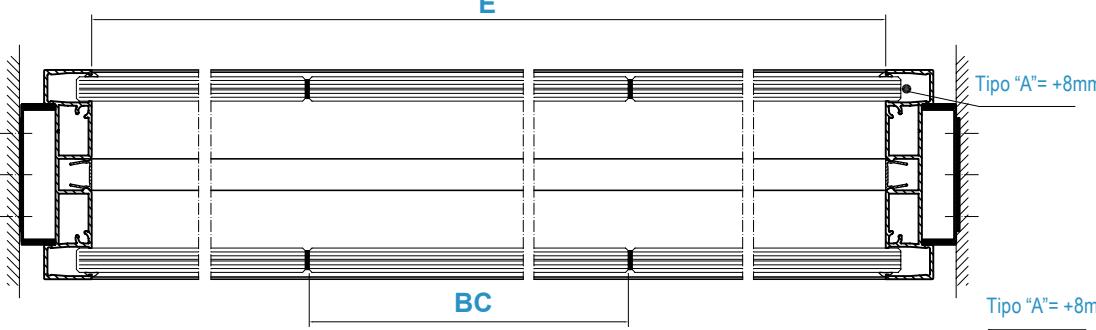

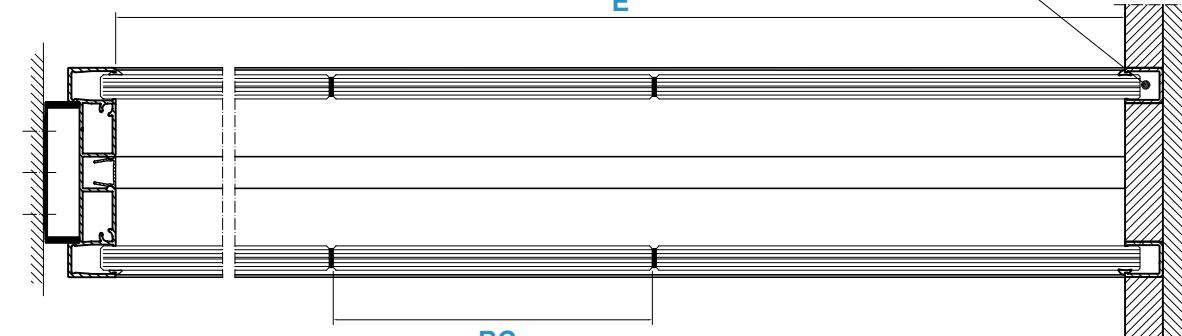

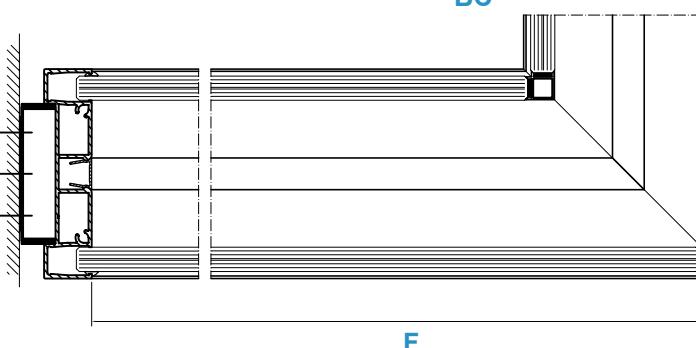

Este perfil inferior permite regular el vidrio en altura mediante calzos.
Los vidrios deben de ser medidos en obra.

This lower profile allows glass height adjustment by using wedges. The glass panes must be measured on site.

Ce profilé inférieur permet de régler la vitre en hauteur à l'aide de cales. Les vitres doivent être mesurées sur le chantier.

System with upper and lower baseboard

Système avec plinthe supérieur et inférieur

Anchuras módulos puerta batiente: 1000 y 2000 mm.

Swinging door module widths: 1000 and 2000 mm.

Largeurs modules porte à battant: 1000 et 2000 mm.

Minimum widths for the double glazed linear system sliding doors: 2540 and 4540 mm for 1000 and 2000 mm openings respectively.

Largeurs minimales pour porte coulissante du système bord à bord double vitrage: 2540 et 4540 mm. pour passages de 1000 et 2000 mm. respectivement.

Anchuras módulos puerta corredera ciega integrada en mampara modular ciega: 2740 y 4740 mm. para pasos de 1000 y 2000 mm. respectivamente.

Blind sliding door inserted in blind modular partition module widths: 2740 and 4740 mm. for 1000 and 2000 mm. openings respectively.

Largeurs modules porte coulissante pleine intégrée dans cloison modulaire pleine: 2740 et 4740 mm. pour passages de 1000 et 2000 mm. respectivement.

Note: Para el cálculo de la medida de la hoja, es muy importante tomar la medida correcta entre el hueco luz del cabezal y el suelo, teniendo en cuenta el desnivel se puede tener el suelo y/o el techo en todo el giro en puertas batientes y todo el desplazamiento de las hojas en puertas correderas.

Note: Pour le calcul de la dimension de la porte, il est très important de bien mesurer l'espace entre la partie supérieure de l'encadrement de la porte et le sol, en tenant compte des différences de niveau éventuelles du sol et/ou du plafond sur toute la rotation des battants et sur tout le déplacement des panneaux dans le cas des portes coulissantes.

Modulación universal altura box

Universal box height modulation

Modulation universelle hauteur box

Anchuras mínimas para puerta corredera del sistema lineal de doble vidrio: 2535 y 4535 mm. para pasos de 1000 y 2000 mm. respectivamente.

Minimum widths for the linear system sliding doors: 2535 and 4535 mm for 1000 and 2000 mm openings respectively.

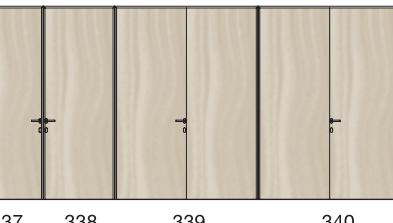

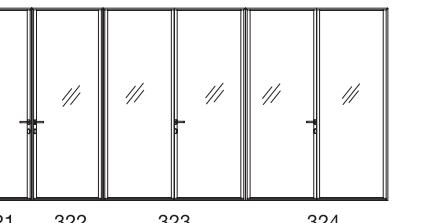

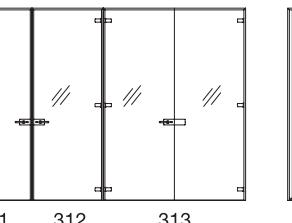

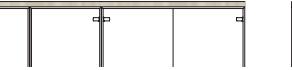

Largeurs minimales pour porte coulissante du système bord à bord: 2535 et 4535 mm. pour passages de 1000 et 2000 mm. respectivement.

Anchuras módulos puerta corredera integrada en mampara modular ciega: 2710 y 4710 mm para pasos de 1000 y 2000 mm respectivamente.

Sliding door built into solid modular partition widths: 2710 and 4710 mm for 1000 and 2000 mm openings respectively.

Largeurs modules porte coulissante intégrée dans cloison modulaire pleine: 2710 et 4710 mm. pour passages de 1000 et 2000 mm. respectivement.

Note: To calculate the dimensions of the leaf it is very important to measure correctly the gap between the header and the floor, taking into account the unevenness that the floor and/or the ceiling may have in the opening of the swing door or the doorslide of the sliding doors.

Impacto, insonorización, desmontabilidad, fuego, registrabilidad, reinstabilidad, repetibilidad.

Son ensayos que se realizan en los sistemas de compartimentación de RAUMAN.

Estos ensayos se certifican y homologan por centros oficiales de investigación tecnológica como TECNALIA.

Todos los sistemas de compartimentación de RAUMAN son patentados a nivel mundial antes de su comercialización.

Impact, soundproofing, dismantling, fire, re-assembly, accessibility, repeatability... are tests that are conducted on RAUMAN compartment systems. These tests are certified and approved by official technology research centres such as TECNALIA. All RAUMAN compartment systems are patented worldwide before being marketed.

RAUMAN soumet ses systèmes de rangement et de cloisonnement aux tests d'Impact, insonorisation, démontabilité, feu, accessibilité pour travaux de maintenance, ré-installabilité, répétitivité. Ces essais sont certifiés et homologués par centres de recherche technologique officiels comme TECNALIA. Tous les systèmes de rangement et de cloisonnement de RAUMAN sont brevetés au niveau mondial avant leur commercialisation.
